Attachment D
MEDICINE AND THE MEDIA

Is there an (unbiased) doctor in the house?

Journalists often forget that conflicts of interest might bias the opinions of their expert sources. Jeanne Lenzer and Shannon Brownlee explain how, in a bid to disentangle commercial messages from science, they have compiled a list of around 100 independent medical experts that reporters can turn to.

Ho hum, another medical scandal in the news. Earlier this month US Senator Chuck Grassley announced his intention to investigate Alan Schatzberg, chairman of the psychiatry department at Stanford University and the incoming president of the American Psychiatric Association, about his multimillion dollar interest in Corcept Therapeutics, a company that is seeking to market a drug that Dr Schatzberg is researching with federal funding, and the extent to which he disclosed and was required to disclose that interest to Stanford.1 In June the New York Times broke a front page story about the alleged failure of three top research psychiatrists at Harvard, each of them a proponent of drug treatment for psychiatric conditions in children, to report that since 2000 they had collectively received more than $4.2m (£2.1m; €2.6m) from various drug companies.2

After ignoring the growing controversy over conflict of interest for years, journalists now seem only too happy to expose wrongdoing in medicine. Yet when it comes to reporting medical news, those self same reporters often seem to forget that conflicts of interest might also bias the opinions of their expert sources. The media are filled with happy talk about “medical breakthroughs” that is based on information gathered from sources with ties to the industry. Yet simply knowing that conflicts of interest can create bias doesn’t answer the question of which studies we ought to believe. Because journalists fail to seek out sources who can offer an independent perspective, many medical stories in the popular media are either unbalanced or simply wrong.

In an attempt to disentangle commercial messages from science and to contribute to better reporting we took a drastic step that we believe can go to the heart of the problem: we created a list of nearly 100 international medical experts who can offer an independent perspective, many of them sources we have cultivated over years of reporting. It includes, from journal publishing, two former editors of the New England Journal of Medicine, the former editor of the Western Journal of Medicine, and a senior editor of PLoS Medicine, former advisers to the US Food and Drug Administration; physician educators; researchers; bioethicists; epidemiologists, methodologists, geneticists, and clinicians from various specialties; medical whistleblowers; and several government or industry officials.

The reaction to the list, which has been embraced enthusiastically by our fellow reporters and roundly condemned by several allies of the drug industry, suggests that the effect of simply gathering these names together could well go beyond making life a little easier for our fellow journalists.

Seeking unbiased sources

The need for such a resource is evident from studies showing that bias and poor reporting on medical topics are widespread in the popular media. Gary Schwitzer, a professor of journalism at the University of Minnesota, publishes HealthNewsReview.org, a website that reviews healthcare news for balance, accuracy, and completeness. Schwitzer and a team of academic researchers analysed 500 stories published in top outlets between April 2006 and April 2008 for two key criteria: did the journalist quote an independent expert, someone not involved in the relevant research; and did they make some attempt to report potential conflicts of interest. The result? Half the stories failed to meet these two very basic requirements.3

In another study Alan Cassels, a pharmaceutical policy researcher at the University of British Columbia, and his colleagues analysed media coverage of five prescription drugs published in 193 Canadian newspapers in 2000.4 Cassels, who is on our list, found that the stories were overwhelmingly positive towards the drugs: all 193 articles included at least one drug benefit, while 68% (132/193) failed to mention any potential harm. Two thirds of the stories quoted a source by name, but only a scant 3% (5/164) included information about conflicts of interest for sources who were not government or industry officials.

In the view of one list member, Arnold
The list

John Abramson, clinical instructor, Harvard Medical School
Marcia Angell, former editor in chief, New England Journal of Medicine
David Antonuccio, professor, Department of Psychiatry and Behavioral Sciences, University of Nevada
Michael Barry, chief of general medicine unit, Massachusetts General Hospital, Harvard Medical School
Ken Bassett, professor of family practice, pharmacology, and therapeutics, University of British Columbia
Lisa Bero, professor, University of California, San Francisco
Stephen Bezruzhka, Department of Health Services and Department of Global Health, School of Public Health and Community Medicine, University of Washington, Seattle
Laura Boylan, assistant professor, Department of Neurology, New York University
Phil Brewer, university medical director, Quinnipiac University, Connecticut; and past medical safety fellow, US National Highway Traffic Safety Administration
Howard Brody, director, US Institute for the Medical Humanities
Steven R Brown, Banner Good Samaritan family medicine residency, University of Arizona College of Medicine
Daniel Carlat, assistant clinical professor of psychiatry, Tufts University School of Medicine, and editor in chief, The Carlat Psychiatry Report
Alan Cassels, pharmaceutical policy researcher, University of Victoria, British Columbia
Robert Cook-Deegan, director, Center for Genome Ethics, Law and Policy, Duke Institute for Genome Sciences and Policy
Sam S Dahr, Retina Center of Oklahoma
John M Davis, Gilman professor of psychiatry, University of Illinois at Chicago
Raymond De Vries, professor, bioethics programme, University of Michigan Medical School
Richard Deyo, Kaiser Permanente professor of evidence based family medicine, Department of Family Medicine, University of Washington, Seattle
Kay Dickersin, director, US Cochrane Center
Mark Ebell, deputy editor, American Family Physician, and professor, University of Georgia
Carl Elliott, University of Minnesota Center for Bioethics
David Elpern
Margaret Ewen, Health Action International, Netherlands
Anne Rochon Ford, coordinator, Women and Health Protection, Canada
Adriane Fugh-Berman, professor, Department of Physiology and Biophysics, Georgetown University Medical Center, and director, PharmaOut.org
Joseph Glenmullen, clinical Instructor in psychiatry, Harvard Medical School
Robert Goodman, founder and director of No Free Lunch and general internist at Montefiore Medical Center, New York
Merrill Gozner, director, Integrity in Science, US Center for Science in the Public Interest
Peter Gotzsche, director, Nordic Cochrane Centre, Denmark
Mark E Helin, medical director, EBPs, Arkansas Evidence-Based Prescription Drug Program, and assistant professor, College of Pharmacy, University of Arkansas for Medical Sciences
David Himmelstein, associate professor of medicine, Harvard University
Jerome Hoffman, professor of medicine and emergency medicine, University of California, Los Angeles
John P A Ioannidis, professor and chairman, Department of Hygiene and Epidemiology, University of Ioannina School of Medicine, Ioannina, Greece, and Institute for Clinical Research and Health Policy Studies, Department of Medicine, Tufts-New England Medical Center, Tufts University School of Medicine
Peter Juni, head of division, Institute of Social and Preventive Medicine, University of Bern, and director, Clinical Trials Unit, Bern University Hospital
Jon Jureidini, head, Department of Psychological Medicine, Children's Youth and Women's Health Service, Adelaide, and associate professor, disciplines of psychiatry and paediatrics, University of Adelaide
Scott Kim, assistant professor of psychiatry
Peter D Kramer, clinical professor of psychiatry and human behaviour, Brown University, Providence, Rhode Island
Barnett Kramer, associate director for disease prevention, US National Institutes of Health
Sheldon Krimsky, Tufts University, and Council for Responsible Genetics
Stefan Kruzewski, Stefan P Kruzewski and Associates
Richard A Lange, professor of medicine, Johns Hopkins Hospital, Baltimore
Jeffrey Lacasse, assistant professor, Department of Social Work, College of Human Services, Arizona State University at West Campus
Dara K Lee, staff cardiologist, Presbyterian Heart Group, Albuquerque, and vice president, Medical Staff Affairs, Presbyterian Hospital, Albuquerque
Gretchen LeFeber, director of patient safety and performance excellence, Sentara, USA
Trudo Lemmens, associate professor, Canada
Jonathan Leo, associate professor of neuroanatomy, USA
Joe Lex, emergency physician, USA
Joel Lexchin, professor, School of Health Policy and Management, York University, Toronto
Abby Lippman, professor, McGill University, Montreal
Peter Lorius, Health Research Group at Public Citizen, United States
William K Mallon, associate professor of clinical emergency medicine, Keck School of Medicine at the University of Southern California, and director, Division of International, LAC-USC Medical Center, Los Angeles
Peter R Mansfield, director, Healthy Skepticism, Australia
Linda Marsa, freelance journalist, US
Charleia Massion, Center for Education in Family and Community Medicine, Stanford University School of Medicine, and member of board of directors, American College of Women's Health Professionals
Charles Medawar, Social Audit, UK
Steven Miles, professor of medicine, Center for Bioethics, University of Minnesota
Barbara Mintzes, assistant professor, Department of Anesthesiology, Pharmacology and Therapeutics, University of British Columbia
Steven Morgan, associate professor and associate director, Centre for Health Services and Policy Research, School of Population and Public Health, University of British Columbia
Ray Moynihan, journalist, Australia
Vijaya Musini, assistant professor, Department of Anesthesiology, Pharmacology and Therapeutics, University of British Columbia, and Therapeutics Initiative, Canada
Thomas L Perry, clinical assistant professor, Department of Anesthesiology, Pharmacology and Therapeutics and Department of Medicine, University of British Columbia
Bruce Pitsy, professor of medicine and epidemiology, University of Washington Cardiovascular Health Research Unit
Arnold Relman, former editor in chief, New England Journal of Medicine
David Rind, senior deputy editor, UpToDate, and associate clinical professor of medicine, Harvard Medical School
Charles Rosen, clinical professor of surgery, University of California, Irvine, and founding director, US Association for Ethics in Spine Surgery
Haya Rubin, director, research and evaluation, Palo Alto Medical Research Institute, California, and adjunct professor of medicine, Johns Hopkins University, Baltimore
Larry Sashik
John Schumann, professor of medicine, University of Chicago, and Maclean Center for Clinical Medical Ethics, Chicago
Lisa Schwartz, Dartmouth Institute for Health Policy and Clinical Practice, Lebanon, New Hampshire
Gary Schwitzer, director, health journalism, MA programme, University of Minnesota School of Journalism and Mass Communication
Vera Hassner Sharav, Alliance for Human Research Protection, US
Allen Shaughnessy, professor, Tufts University School of Medicine, Boston, Massachusetts
Anthony So, programme on global health and technology access, Terry Sanford Institute of Public Policy, Duke University, Durham, North Carolina
Robert C Solomon, American College of Emergency Physicians, and medical editor in chief, ACEP News, US
Des Spence, general practitioner, Glasgow, and UK spokesman of No Free Lunch
Sydney Z Spiesel, clinical professor of paediatrics, Yale University School of Medicine, and regular commentator for Slate and US National Public Radio
Alex Sugerman, attorney, Prescription Access Litigation, US
Leonore Tiefer, New View Campaign, and New York University School of Medicine
Alexander Tsai, residency training programme, Department of Psychiatry, University of California at San Francisco
Jennifer Washburn, journalist, US
H Gilbert Welch, Dartmouth Institute for Health Policy and Clinical Practice, Lebanon, New Hampshire
Michael Wilkes, professor of medicine and director of global health, University of California, and formerly dean of education and former editor in chief, Western Journal of Medicine, University of California, Davis
Sidney Wolfe, director, Health Research Group of Public Citizen, US
Steven Woloshin, Veterans Affairs Outcomes Group
Alastair Wood, US
Steffie Woolhandler, associate professor of medicine, Harvard University
James Wright, managing director, Therapeutics Initiative, Canada
Gavin Yamey, senior editor, PLoS Medicine, US
The list can also be viewed at www.healthnewsreview.org/independentexperts.php
Relman, former editor in chief of the New England Journal of Medicine and professor emeritus of medicine and of social medicine at Harvard Medical School, such bias fails to serve the public good. “People who have a financial stake in the results of clinical research can well be biased in the way research is conducted, in the way they report it, and what they say about it when interviewed by the media.”

**Changing the status quo**

The question is why reporters seem unable to grasp the connection between the large body of evidence showing that financial conflicts of interest create bias in medical research and the need for the media to seek out independent sources. To be fair, journalists face a daunting task when trying to sift through medical research, and many are as yet unaware of the profound influence the drug industry has over research results and the ways in which the industry shapes medical “truths.” Many reporters also fail to realise that the individuals and organisations they turn to for expert commentary, such as professional groups and charities, professional guideline authors, federal advisory panelists, and patients’ groups, often depend financially on the industry. Thus there is a self-reinforcing process in which commercially sponsored researchers, whose prominence is enhanced by the industry’s public relations machine, are dubbed “experts,” while independent sources are cited less often.

From informal conversations with colleagues we also know that other factors are at work when reporters fail to take conflicts of interest into account. Some confess that they hesitate to ask sources about any potential conflicts for fear that the source will take umbrage and refuse to be interviewed. Others assume that if a study appears in a peer reviewed journal it must be valid.

One of the solutions to the problem of biased news reporting, in the view of Michael Wilkes, professor of medicine and director of global health at the University of California, Davis, is greater transparency.2 We think the list is a step in that direction. The chief requirement for membership, besides a recognised area of expertise, is that the expert must not have taken any industry funding for at least the past five years. Beliefs about certain drugs or treatments were not criteria for inclusion or exclusion. Indeed, the list includes experts who sit at opposite poles of the spectrum of beliefs on certain issues.

**Backlash and honour**

Within days of our announcing that we would make our list available to reporters the requests began pouring in. Thus far we have sent a copy of the list to 105 reporters, authors, and editors from such media outlets as the New York Times, Newsweek, Forbes, Fortune, Bloomberg News, the Washington Post, US News & World Report, the Canadian Broadcasting Corporation, Medscape, and many other publications across the US and several other nations. Senators and a state attorney general have also requested it.

Surprisingly, we are also receiving requests from recognised experts who wanted to be on the list. Being a member, it seems, is a badge of honour, say several of the list members we interviewed for the BMJ. Others, like list member Barnett Kramer, want to improve the quality of medical reporting. Kramer, a medical oncologist and associate director for disease prevention at the US National Institutes of Health, said, “Working journalists can be overwhelmed by PR.”

The other surprise came after the publication of a story we wrote in the online magazine Slate that mentioned the list.6 Within days bloggers were furiously accusing us of everything from biased, sloppy reporting to being members of the Church of Scientolgy (which is opposed to psychiatric drugs). Many of our critics—virtually all of them backed by the industry—opined that our list was undoubtedly filled with experts who were on the payrolls of plaintiffs’ attorneys. (A few have testified in court cases, and those who have been paid for their testimony have disclosed it for the list.) This venom was unexpected, as we imagined that the list would be viewed as a positive step towards helping reporters identify doctors and other experts who can address thorny and complex medical issues without having competing financial interests. Now we think we understand the backlash a little better.

One of the problems recognised by Schwitzer is that many journalists rely for story ideas on news releases from the industry’s public relations departments, and some even use releases as the sole source of information on experts to interview. By offering an alternative list of highly credible, independent experts, the industry may fear that its paid key opinion leaders7 and the professional societies whose favour they cultivate will no longer be the first source of medical news.

Peter Gotzsche, director of the Nordic Cochrane Centre and a member of the Danish group Doctors Without Sponsors, described why he joined the list: “Industry knows that buying doctors is an effective marketing tool . . . far more effective than the dollars they spend on drug representatives. This leads to less than optimal health care for patients.”

Beyond the list’s usefulness to journalists, we hope that it will also be used by government agencies, medical journal editors, and professional societies as they seek out experts to serve as editorialists and members of clinical guideline and advisory panels. The FDA, for example, has a copy of the list. We would be pleased to send it to other agencies and professional societies.

Readers can decide for themselves whether our list of independent experts includes any experts with “something worth saying.”
